

This material has been specifically created for use on wine bottles, with a plastic layer behind the paper surface which is used to help provide additional strength. This is particularly beneficial when wanting labels to look good even with exposure to condensation or damp conditions.

Adhesives standard stock	 Permanent
Colours without print	 Matt White
Durability	Better than standard paper, but still poor overall
Anti-Tear	 Material resists large tears
Waterproof	 Plastic layer aids integrity in damp conditions
Thickness	Approximately 100 microns
Writable	 Pencil  Pen  Marker
Extra Notes	Also available with 'antique' style texture effect for a traditional or luxury feel. Some adhesive and colour combinations may not be available in our standard stocked range. Please contact our label experts for more details.

Production Compatibility

-  Digital
-  Flexographic
-  Hot Foil
-  Thermal
-  Blanks

Sustainability

The paper component of this label is FSC Mix certified sustainable and biodegradable, but the plastic layer used to provide strength makes recycling challenging.

-  **Recyclable** Difficult due to plastic layer
-  **Biodegradable** Paper only
-  **FSC Mix certified paper**

Pick Wine Grade Paper when you need...

A wine bottle label

The clue is in the name - this material has been specially engineered for optimum compatibility

Something similar: Antique Paper

A label for chilled products

This material has great performance in lower temperatures, great for chilled produce.

A more durable option: Polypropylene

A label with added strength

A plastic layer behind the paper surface helps give the label added strength and durability.

Superhero strength: Metalon

A luxury or traditional label

This premium quality paper material is perfect for premium products, with antique styles available.

Shiny and fancy: Gloss Silver Polypropylene
